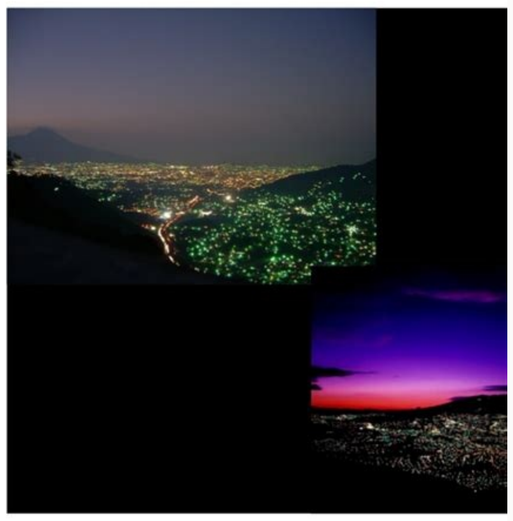
Metabolismo urbano pdf download full version free

- El fenómeno de urbanización es explosivo a nivel mundial
- Esta organización de la sociedad conllevará desafíos a escalas cada vez mayores
- La extrapolación de la solución urbana pasada y presente no es necesariamente la solución del futuro
- Los estudios detallados del consumo energético urbano, las cadenas productivas y de consumo recién comienzan a plantearse
- Entender el rol de la energía como parte de las cadenas metabólicas y no sólo como consumo final permitirá la mejor planificación y es clave para entender los riesgos
- Será necesario desarrollar y consolidar herramientas de marco conceptual que permitan el abordaje eficiente y eficaz del problema
- Como lección histórica sabemos que crisis ambientales no se traducen por igual a los integrantes de la urbe; se transmiten a través de los estratos que pueden reaccionar en forma desconectada y terminar enfrentándose



The concept of urban metabolism dates back to the 19th century (Wolman, 1965; Odum, 1996), since cities have become the engine of economic development and human well-being. Understanding cities is much easier if we are aware that they are natural ecosystems, obeying the same laws (the maximum power principle of Lotka, Darwin's evolution, natural selection) as all other compartments and species. Clear. Passing from sustainability rhetoric to community implementation and well-being is something that will not come by itself, nor can it be approached through linear and deterministic approaches. J. Therefore, research on urban metabolism should urgently engage in designing sustainability solutions for the socio-ecological dynamics that describe and understand the interdependence and dynamics of cities and ecosystems (John et al., 2019). doi: 10.1016/j.resconrec.2017.09.014 CrossRef Full text | Google Scholar Fan, J. Wei, H., Shenghui, C., Yarime, M., Hashimoto, S. and Managi, S. This is probably the most difficult aspect, but also the most crucial aspect of the sustainability and stability of cities. Linking urban metabolism to political strategies, it is necessary to measure and change the performance of urban sustainability, developing the interdisciplinary practice of urban metabolism (Dijst et al., 2018). Instead of just addressing urban development and ecological preservation, city planners must always be aware of the sustainability aspects related to the quality and typology of metabolism (CUI, 2018).
